一.java环境变量的配置

1.下载JDK

首先我们需要下载java开发工具包JDK,下载地址:

jdk的安装和配置,环境变量的配境变量的配置

网址:

https://www.oracle.com/technetwork/java/javase/downloads/index.html

2.配置环境变量

1.jdk下载后,安装,安装完成后,右击"我的电脑",点击"属性",选择"高级系统设置",配置环境变量:(3个设置) JAVA HOME,PATH,CLASSPATH三个

在"系统变量"中设置3项属性,JAVA_HOME,PATH,CLASSPATH(大小写无所谓),若已存在则点击"编辑",不存在则点击"新建"。
变量设置参数如下:

② 变量名: JAVA_HOME

③ 变量值: C:\Program Files (x86)\Java\jdk1.8.0_91 // 要根据自己的实际路径配置

③ 变量名: CLASSPATH

③ 变量值: .;%JAVA_HOME%\lib\dt.jar;%JAVA_HOME%\lib\tools.jar; //记得前面有个"."

② 变量名: Path

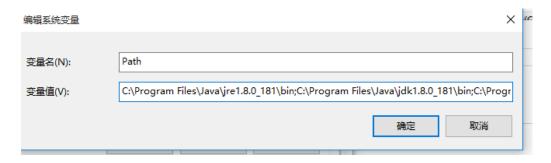

③ 变量值: %JAVA_HOME%\bin;%JAVA_HOME%\jre\bin;

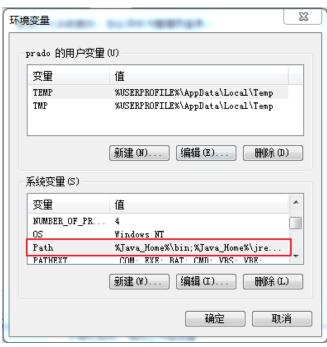

JAVA HOME 设置:

PATH设置

记得用分号隔开。

class字节码文件

CLASSPATH 设置

这是 Java 的环境配置,配置完成后,你可以启动 Eclipse 来编写代码,它会自动完成java环境的配置

查看是否配置成功:

dos窗口windoes+r,输入:java -version -->实质上调用了path的C:\Program Files\Java\jdk1.8.0_181\bin这个路径下的java.exe

配置环境变量:

```
C:\Users\prado>java -version
java version "1.8.0_91"
Java<TM> SE Runtime Environment (build 1.8.0_91-b14)
Java HotSpot<TM> 64-Bit Server VM (build 25.91-b14, mixed mode)
```

查看JDK配置成功:

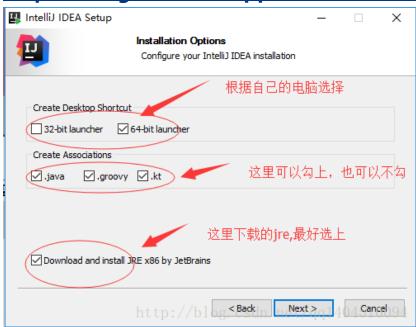

JAVA HOME 制定JDK安装的根目录

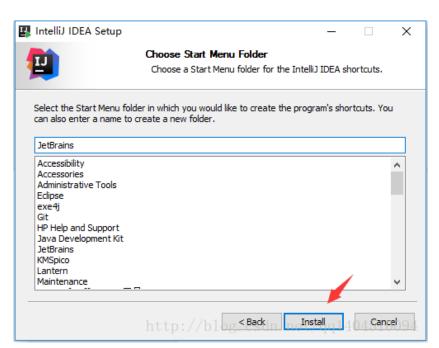

CLASSPATH 编译class文件

JDK默认装c盘

二.idea的安装与授权:

https://blog.csdn.net/qq1404510094/article/details/79005826

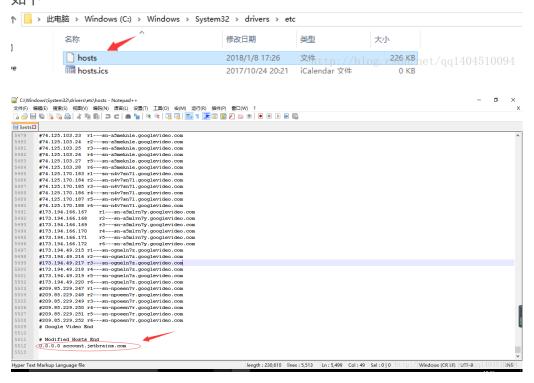

接下来我们运行IntelliJ IDEA

两个改动:

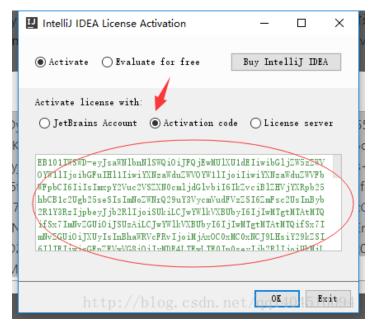

1.这里要注意一下,我们需要修改一下hosts文件(如果修改不了,请修改一下权限),文件路径如下

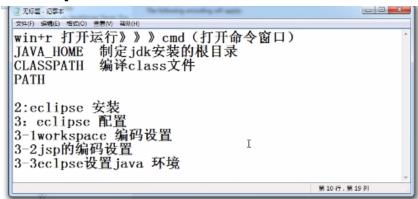

```
# copyright (c) isas-zona microsoft corp.
3
  # This is a sample HOSTS file used by Microsoft TCP/IP for Windows.
   # This file contains the mappings of IP addresses to host names. Eac
  # entry should be kept on an individual line. The IP address should
   # be placed in the first column followed by the corresponding host n
   # The IP address and the host name should be separated by at least of
   # space.
   # Additionally, comments (such as these) may be inserted on individu
   # lines or following the machine name denoted by a '#' symbol.
  # For example:
         102.54.94.97
                         rhino.acme.com
                                                  # source server
          38.25.63.10
                          x.acme.com
  # localhost name resolution is handled within DNS itself.
     127.0.0.1
                     localhost
  0.0.0.0 account.jetbrains.com
  127.0.0.1
                 activate.navicat.com
```

2.获取注册码: http://idea.lanyus.com/

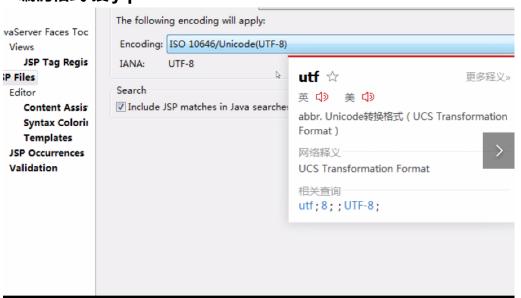

http://10.90.120.2:5000/

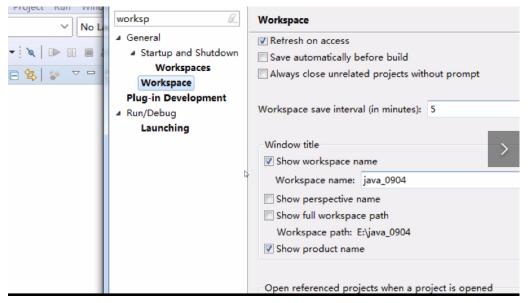

三.eclipse的安装:

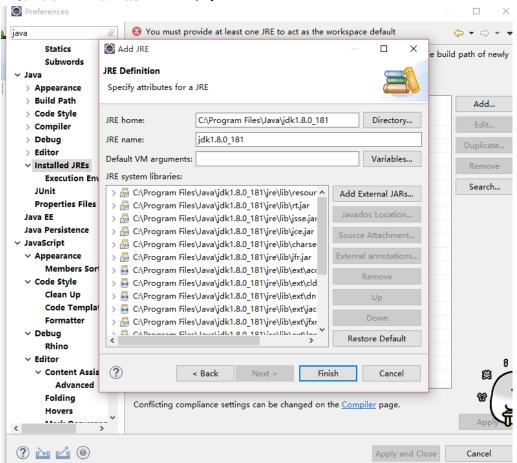

创建工程,E/java_3450文件,两个地方改动.设置编码格式为:utf-8 1.编码格式:搜:jsp

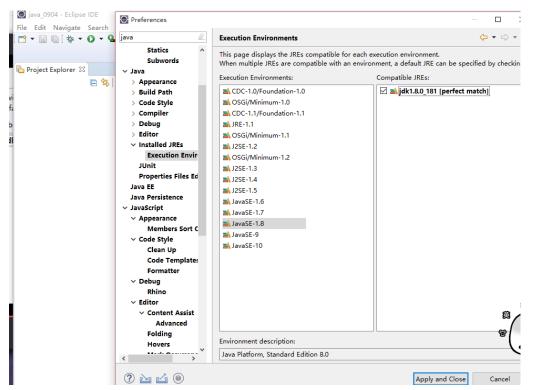

搜:workspace(工作空间)

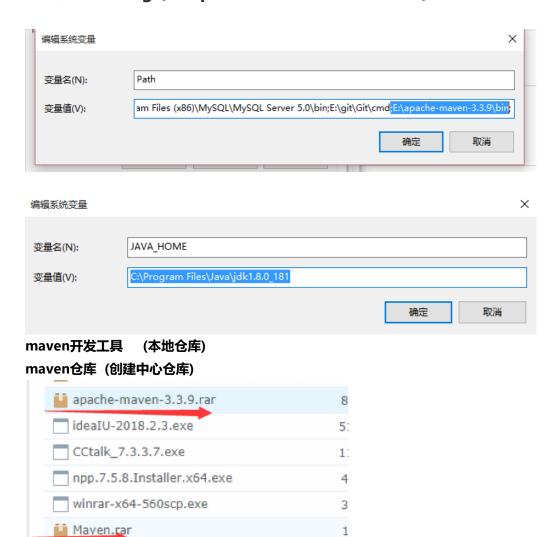

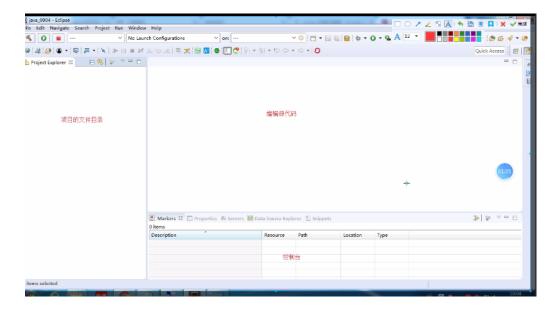

2.搜:java,选择JDK,JRE的路径(图一.默认给的是jre,要移除,换新的jdk路径.图二JRE配置,要看JDK对应的JRE版本.)

3.maven工程的配置,在高级设置中配置环境path,配置JAVA_HOME .修改本地仓库bin中的setting.(E:\apache-maven-3.3.9\conf).

```
5:利用maven 创建java ee 打包 (package) 选war
5-1创建完成项目,没有web.xml
5-2新增jsp文件的时候,这个错误,因为没有servlet-
api和jsp-api两个依赖
```

4.javase创建:(项目文件目录区右键,创建工程,然后搜maven,创建一个简单maven工程.)

重点:两个快捷键生成一个类的无参,有参构造方法,get,set,设置器和访问器,重写toString().

ctrl+shift+O:快速导包,比如:时间类导包Date alt +shift +s 快速生成get和set方法

如何创建maven项目:

groupid 项目根包名(比如:com.lanou)

artifactid 项目名(比如:javase01)

```
☑ Student.java ⋈ Main.java index.jsp inde

           terminated Tomcat 490 Server at localhost (Apache Tomcat) (CyProgram Files/Javaylicki.80_181\bin\javaw.exe (2019年2月21日下午543-33) 
二月21, 2019 5:57:10 下午 org. apache.coyote. AbstractProtocol pause 信息: Pausing ProtocolHandler ["ajp-nio-8009"]
```

4.javaee的创建,(tomcat服务器的配置,架包需要改成war;创建完成会报错,没有wabapp,右击2.5那个小地球,选择.javaee项目需要有jsp页面,然后在webapp上新建一个jsp文件,名为index.导架包.去maven工程中下载.jsp不能直接运行,需要通过浏览器配置服务器运行,配置tomcat服务器,在控制台server右键,去Apache找当时安装的tomcat9.0版本.下路径需要找到当时安装的tomcat的地方,然后运行.)
